Atlantean  
The Atlantis animal  
Antelio

The Antelio was one of the animals of Atlantis. He looked like a <sup>m</sup> antelope with a lion's <sup>l</sup> head. He had wings but he was in trouble with <sup>m</sup> swimming because the legs were so <sup>o</sup> long. His fur was black with brown stripes. He was a friendly animal but the other animals were scared because he had big horns on the head. <sup>60</sup>  
The favourite food of the Antelio ~~was fish~~ was fish from the sea. Antelios could grow to a high <sup>length</sup> of two metres. He weighed more than <sup>a</sup> hundred kilograms. His strong hoofs could hurt other animals. His teeth <sup>were</sup> as strong as ~~from~~ the teeth of a crocodile. So he ate big fish too. It was one of the safest animals in the ~~Atlantis~~ sea <sup>around Atlantis</sup>.

Helene, your drawing is very nice and your text is brilliant although you made some tiny mistakes.
